• 5.1.1

• If the order of the test is  $2^k$  and the number of replicates is  $2^m$ , then the number of possible combinations of the test is  $2^{k+m}$ . If  $2^m$  is less than the number of the highest order of the test, then the number of combinations is less than the number of the highest order of the test, and the test is not independent. If the number of the highest order of the test is equal to the number of combinations, the test is independent.

This gathering of information is required by 37 CFR 1.111. The information required is used by the Patent Office to determine whether an invention is eligible for patent protection. The information is also used to determine whether an invention is novel and non-obvious. The information is also used to determine whether an invention is entitled to a patent. The information is also used to determine whether an invention is entitled to a patent. The information is also used to determine whether an invention is entitled to a patent.
